

## Forensic magnifier Regula 1005

**The forensic magnifier is intended for express authenticity verification and advanced examination of banknotes, securities and other documents with security features.**

**The device enables to examine small size objects, coins, postage stamps, fragments of photographs, seals, handwriting and signatures.**

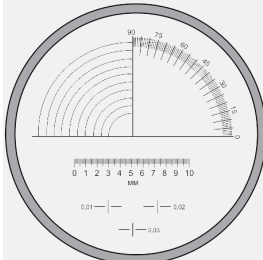

Regula 1005 is a compact device constructed in a metal body. The optical system consists of two lenses. One of them is movable. Certain models are supplied with a LED light source or a measuring scale for linear dimensions and angles estimation.
